

Adjust an Oil Design for the Acrylic Painter

When you find a beautiful design originally painted in Winsor/Newton Oils do you wish you could create such a work of art? But your training has been in acrylics so there is no need to wish for something that cannot come true. Wrong! Now you can choose a Winsor/Newton design and convert it to an acrylic design with the TCS Color Match On-Line program. Here's how simple it is:

1. From the main menu click **TCS Color Conversions**.
2. Choose the brand Winsor/Newton in the oil column by single clicking on it.
3. All of Winsor/Newton colors will be listed in alphabetical order. From that list of color names, click in the **check box** to choose all of the colors that were used in the design (you may choose up to thirty (30) color names at one time).
4. After selecting all of the colors, click the **Submit Color Names** button.
5. A second list of your selected color names will appear on the right side of the screen. Review the "Selected Colors" list, to verify them. If you find a name which you do not want, you may double click on the name and it will be removed. If a name is missing, you can select and add to the end of the list.
6. When color name selections are complete, click on **Match Colors** to select the brands to match.
7. Choose up to three (3) brands to match. The acrylic brand(s) you own should be the target brands for the matches. Then click **Submit Brands**.
8. A second list of your selected brands will appear on the right side of the screen. Verify your selections. To remove a brand you chose, double click on the name and it will be removed. To add another brand, select it, then **Submit Brands** again. (There is a maximum of three (3) brands per query.)
9. From the Selected Brands table, click **Match Brands**.
10. A screen to **Customize your Color Search** is displayed. Here you can type a label for your conversions that will identify the design you are doing.

11. On this screen, answer **YES** to Search against my inventory. Then press **Continue**.
12. Here you will find the Color Match Solutions to your query. You will also see your inventory of the matched colors.
13. Now you can paint the design in the brand/medium you use.

Please note: You should use the techniques you have been taught for your medium of choice.
